Mark,

I have contacted him a couple times. He was going to talk it over with Mike Ramsey at their staff meeting last Tuesday but he has not gotten back to me since. If you don't mind, would contact him. I don't want to bug him too much.

Thanks, Duane

[Mark,](#)

I would suggest that you contact DNR and talk to them about covering the costs for seeding. We have paid for this type of reseeding for DNR and WDFW lands and I think we covered the same for private lands after the fires near Wenatchee a few years back. Although they don't have money in their budget for this DNR will be requesting a supplemental and this can be part of the request. I would start with Fire Manager Mark Kahley 902-1011, or the head of the budget shop Bob Van Shrool 902-1099.

If this doesn't work you can submit a supplemental budget request. These request are due October 17th.

Let Linda and I know how this works out and we can provide you additional help if needed.

Hope your summer went well.

Jim

Jim - I talked to Keith about this last week - and did not realize he was out till the 19th. This is the estimate - that is being worked on as we speak - for fire damage in the Dayton area. I was hoping we could find some \$ for the seed since an emergency was declared -- any thoughts including working with water quality folks would be helpful.

Keith --- best estimate is between \$100,000 - \$200,000 -- for seed to be done within the month -- if we know funds are available, then they could get seed folks to go ahead and let them seed. This is for the fire damage on private lands...

-- let me know where to go with this

Mark,

You have a very simple question with a not so simple answer. The acres that are critical for instability over the winter in the Pataha Watershed could be between 1,000 to 2,000 acres in the upper Pataha. Terry Bruegman could very well have that in the Tucannon or more and could probably furnish you with more detailed figures. The acres in the Pataha are the ones that had the high intensity burn where nothing is expected to come back. The majority of those acres include the Baker Pond and Alan Property where the people lost their homes and cabins and also along the upper Pataha on private land. The preliminary costs for grass seed and some wheat mixed in for quick germination and over winter protection, would be about \$100 per acre. There is a very good chance that BPA can furnish the helicopter to do the seeding, which would come at their expense with no contract modifications for our districts concerning our current contracts with BPA. Their contribution could meet any match that might be required from funding that you might acquire.

Terry Bruegman has funding from a grant that could cover roughly seed grass on 450 acres but again, you should talk directly to Terry.

I'll give you a call but thought these figures might help you.

Thanks, Duane

Mark,

Bill just sent me the e-mail with your remarks about our possible needs. As far as the Pomeroy CD is concerned, we are needing some funding to help with the reseeding of the Upper Pataha Watershed. This area will be very susceptible to runoff this winter if we have any snowfall pack at all and we would like to get some seed spread within the next couple of months, preferably before the rains come and pack the ash down.. BPA has tentatively agreed to furnish the helicopter if we can secure the grass seed. We have contacted BPA and the SRFB about possible contract modifications and also additional funding if possible, but have not received any confirmation at this time. I will let you know what comes out of this.

Thanks, Duane
